

All questions are **equally weighted**. As you prepare your entry, please refer to the detailed rubrics on the following pages.

2025 Fall Virtual Project Showcase Judging Rubric						
		Not Satisfactory (1)	Satisfactory (2)	Good (3)	Very Good (4)	Exemplary (5)
Problem Definition	Project need, desired specifications, and impact are defined and a project synopsis that informs the audience is presented	A clear problem definition or expected impact are not provided	Brief problem definition and expected impact are provided, but are not clear	A clear problem definition and expected impact are provided	Definition of problem and its expected impact are well defined	Problem definition and expected impact are articulated clearly and concisely
	Demonstrate understanding of existing solutions and their limitations or lack of solutions	No mention of existing solutions or their limitation	Brief mention of existing solutions and their limitations or lack of solutions	A clear description of existing solutions and their limitations or lack of solutions are given	Well defined explanation of existing solutions and their limitations or lack of solutions are given	The limitations of existing solutions or lack of solutions is clearly and concisely articulated
Methodology	Demonstrates a well-defined approach in addressing the problem	No approach is defined	Approach to solving the problem is briefly defined	Approach to solving the problem is clearly defined	Approach to solving the problem is articulated clear and concisely	Approach to solving the problem is articulated in an exceptional way and it engages the audience
	The proposed design solution contains sufficient detail and technical depth	Proposed solution is not defined or explained	Proposed solution is explained briefly with some technical depth	Proposed solution is clearly defined and includes sufficient technical details	Proposed solution is clearly defined, includes sufficient technical details, and demonstrates a clear understanding of relevant practices and methods	Proposed solution is defined in-depth with a clear purpose and extreme attention to detail. Technical depth exceeds expectations and provides new insight into their problem

2025 Fall Virtual Project Showcase Judging Rubric (Cont.)

		Not Satisfactory (1)	Satisfactory (2)	Good (3)	Very Good (4)	Exemplary (5)
Outcomes	The developed prototype (hardware/software) or analytical model are of high quality and supported by engineering analysis	Poor quality of proposed solution. No engineering analysis is provided	Decent quality of proposed solution, is clear to understand, and is supported by some engineering analysis	Great quality prototype or analytical model. Provides in-depth explanations of results	High quality prototype or analytical model, which is clearly presented, and it is supported by significant engineering analysis	Exemplary quality prototype or analytical model that exceeds expectations. Offers new or thoughtful insight, is well defined and is heavily supported by engineering analysis
	Proposed solution considers additional factors such as manufacturability, cost, etc.	Little to no mention to additional factors impacting a viable solution	Briefly mentions additional factors and provides explanations.	Impact of additional factors is adequately presented to support proposed solution	Clear insight and thought of additional factors are included in the presentation	In depth analysis of additional factors and their impact on the proposed solution is provided
Video Quality	Video presents the material in a well-organized way- from framing the problem to presenting the proposed solution	Little to no organization of video. Presented information is difficult to follow	Information is clear and easy to follow	Information is clear, easy to follow, and is presented in an organized format	Great organization of video. Information is very clear and easy to follow. Material is presented in an interesting and engaging manner	Exemplary organization of video. Material is very clear and easy to follow. Video is presented in an interesting and engaging manner that adds value to the overall presentation and completely engages the viewer.
	Presenters make effective use of visual aids (images, graphs, tables, other) to improve video effectiveness	Little to no use of visual aids or visual aids are illegible	Some visual aids are included which are clear and support the project	Good visual aids are included which are clear, easy to understand, and support the proposed solution	Great use of visual aids. Visual aids are clear, easy to understand, relevant to proposed solution, and enhance the effectiveness of presentation	Exemplary use of visual aids. Visual aids are clear, easy to understand, greatly enhance the effectiveness of the presentation, and offer the viewer an additional insight into the proposed solution.
